Improved Drain Valve For Hastings Fuel Water Separator Filters

Hastings Filters is pleased to announce the introduction of a new type of drain valve for their fuel water separator line. The current valve design has been used for a number of years.

In our continuing effort to improve the product line, Hastings has recently implemented a new style of valve design.

While the new design is shorter, which allows more clearance, the main benefit will be the increased gripping area of the nut itself. We trust that this will allow the drain to be opened by hand most of the time.

Please look for filters with this new valve design in your upcoming Hastings filter orders.
